Přírubové spoje

Při používání točivých přírub se používá gumové nebo kaučukové ploché těsnění. Spojovací šrouby se musí utahovat křížově, přičemž je nutné používání momentového klíče, aby bylo dosaženo správného utažení (viz tabulka):

Flange joints

When use is made of flanges and flange adaptors, flat EPDM gaskets/sealing rings are used for sealing. The bolts should be tightened crosswise, requiring the use of a torque wrench to get the correct pressure (see chart):

Přechodné fitinky/závitové fitinky z PVC na železo
Pro použití PVC přechodných a závitových fitinek na železo by se měla používat silikonová nit nebo PTFE páska k utěsnění závitů. Utáhnutí se provádí ručně, dodatečná půlotáčka ze speciálním přístrojem k dosažení úplné těsnosti je možná. Násilí je při montáži PVC přechodných fitinek a závitových fitinek nepotřebné a zvyšuje nebezpečí poškození.

PVC Adaptor fittings/threaded fittings on metal
When PVC adaptor fittings/threaded fittings are used on metal, PTFE-tape (e.g. Teflon®) should be used as sealing. Tightening is done by hand, with a possible added half turn by means of a strapwench, to get complete sealing. When mounting PVC adaptor fittings and threaded fittings do not overtighten, as this will increase the risk of damage.
